

Reimagination Tech, Neurogine to Ride Contactless Payment Wave

Partnership to deliver convenience and social-commerce integration for merchants and consumers

LOS ANGELES, CALIFORNIA/ KUALA LUMPUR, MALAYSIA – April 23, 2026 – Reimagination Technologies, Inc (RT), a recognised innovator in WhatsApp payment solutions and Neurogine Sdn Bhd, a leading Malaysian fintech solution provider, today announced a partnership that will significantly broaden the availability and adoption of state-of-the-art payment technologies across key markets.

According to RT Chief Executive Officer Jaime Federico Gonzalez Gasque, the partnership, formalised through a newly signed Distributor/Reseller Agreement, marks a pivotal moment for RT as it expands its portfolio and global footprint. “By integrating Neurogine’s range of advanced payment technologies, we can deliver a more robust and innovative ecosystem to our customers, elevating the capabilities of our SocialCashier® platform and our broader SocialPOS® and VoicePay solutions,” he said.

“We are now poised to offer a more comprehensive and innovative payment ecosystem. This allows us to deliver cutting-edge, secure solutions to our customers, enhancing the capabilities of our SocialCashier® platform.” RT will distribute and resell Neurogine’s comprehensive suite of software and hardware products, leveraging RT’s expertise as a software developer and SaaS provider of WhatsApp payment solutions alongside Neurogine’s robust offerings and various SmartPOS terminals.

RT will represent key Neurogine products like Neurogine n2Tap, Neurogine nDMP (Device Management Platform), Neurogine nDiagnose, Neurogine nVenTap, Neurogine n2Tap plug-in, Neurogine nToken, Neurogine nCard, Neurogine nMerchant and hardware offerings like J1 and J2 Smart Multipurpose terminals and Tablet SmartPOS. “Our deep experience in social and conversational commerce, combined with Neurogine’s hardware and software stack, is expected to turbocharge the rollout of digital payment solutions in both developed and emerging markets,” said Gasque.

Neurogine Chief Executive Officer Chen Chee Onn added, “This collaboration underscores our mission to make digital payments accessible, efficient and secure. By working with RT, a firm with a bold vision and proven delivery model, we can reach underserved markets, support small and medium-sized merchants, and drive the realisation of digital economies forward.”

This alliance comes at a critical inflection point in the global payments landscape. The contactless payments technology market, valued at USD46.7 billion in 2024, is projected to surpass USD100 billion by 2032, reflecting a sustained shift toward tap-and-go convenience. Non-cash transactions are growing at an annual rate of over 16 per cent with forecasts estimating more than 2 trillion cashless payments by 2026, underscoring the accelerating shift away from cash. On top of that, digital wallets are firmly entrenched and expected to account for over USD25 trillion in global transactions by 2027, representing nearly half of all e-commerce and point-of-sale sales combined.

“We are seeing a rapid structural shift in how the world pays. In this context, our alliance with RT will accelerate access to the payment innovations that are already defining the future of commerce,” said Chen adding the partnership marks a commitment by both organisations to drive global digital commerce transformation.
